“From bits to information”

Security, Incident  
Response and  
Forensic  
Computing

# Information Security

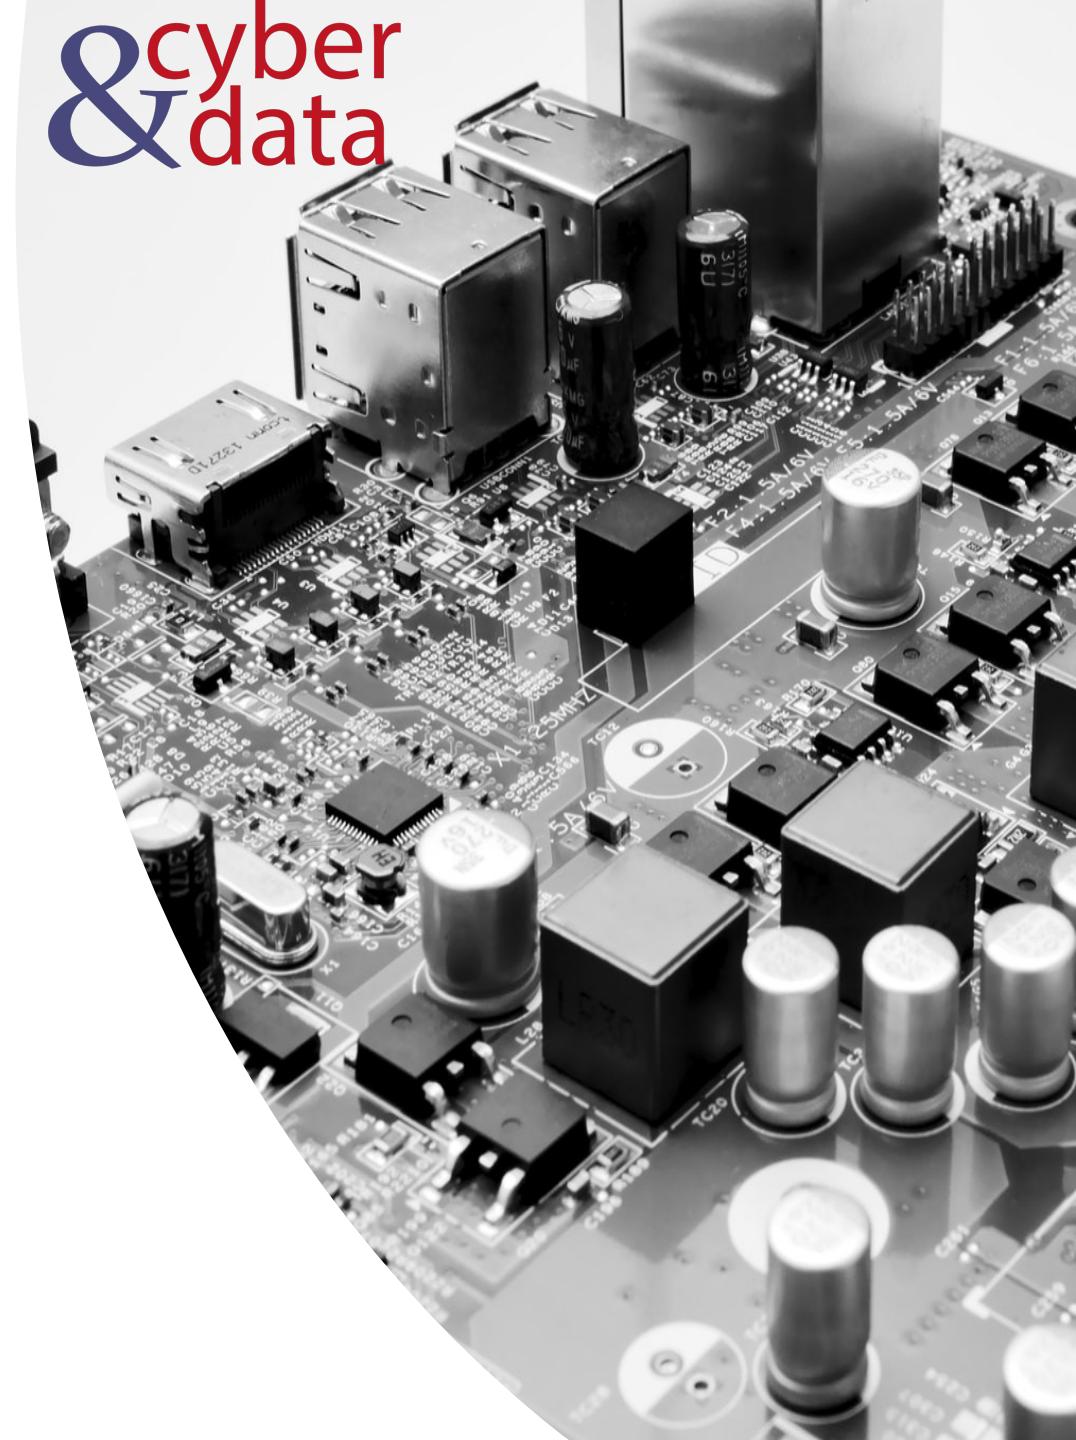

cyber  
&  
data

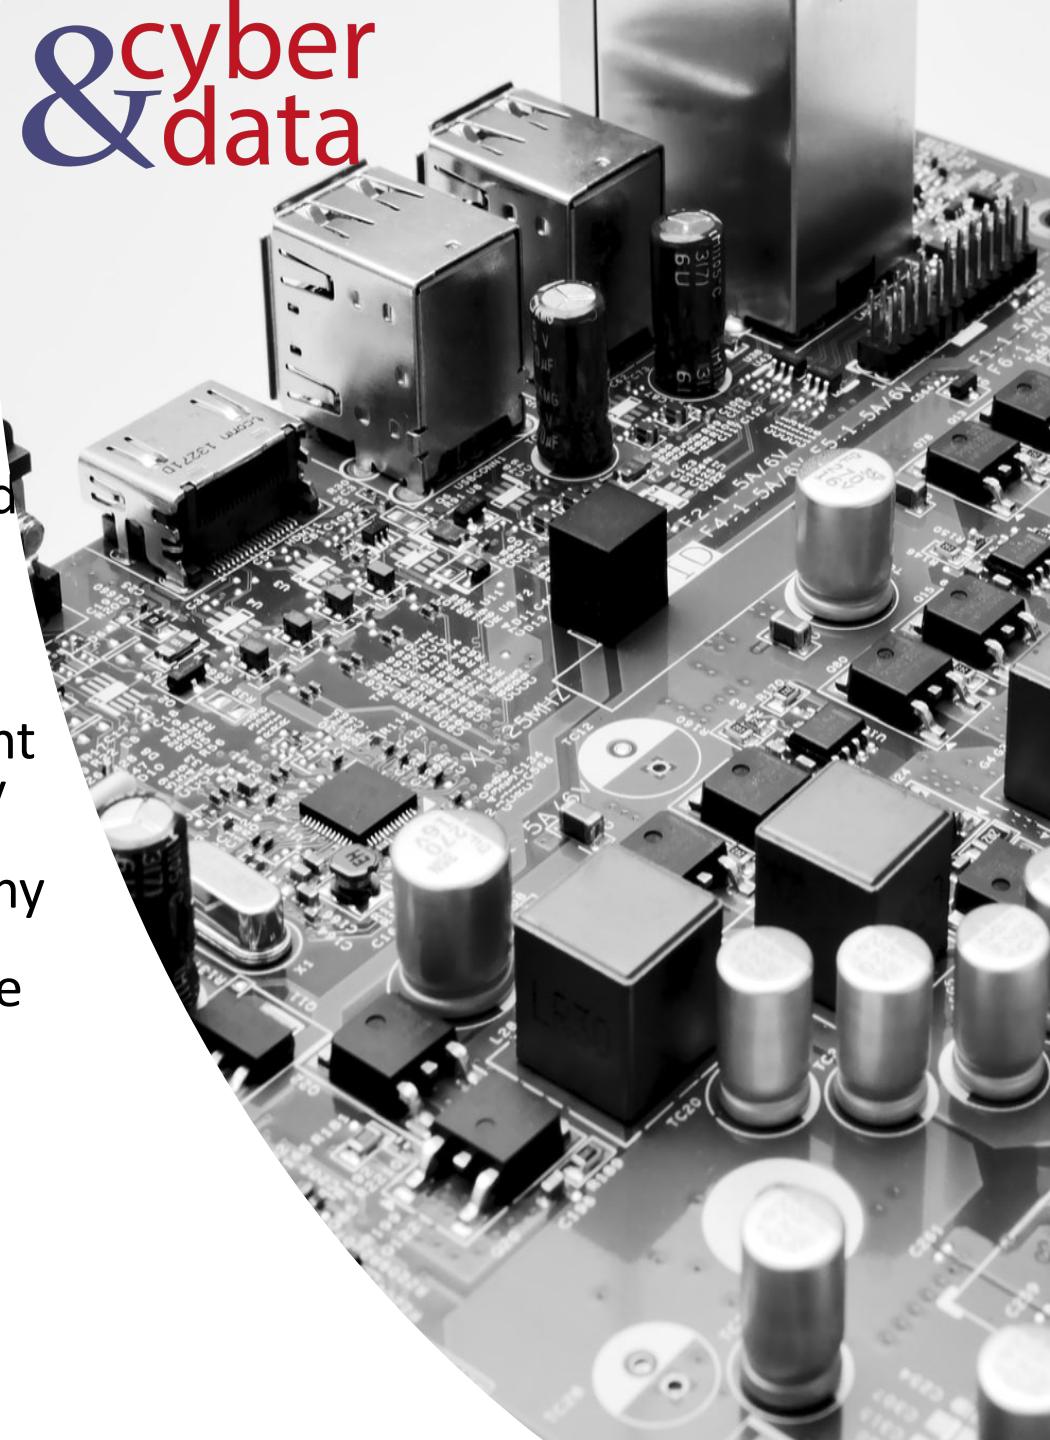

# Investigation

- Investigating an intrusion on a system (incident response). This might lead to a criminal prosecution, but most of the time the intrusion is investigated in order to be able to detect it in the future, and to thwart the activities at an early stage.
- Investigation of a criminal activity (forensic computing). This might lead to a criminal prosecution, or to thwart the activities in the future.
- Investigation of a breach of security policy. This might lead to a disciplinary procedure within an organisation.

# Due Care and Due Diligence

- With due care, the organisation must make sure that has taken the correct steps in the creation and implementation of its security policy and in its risk analysis.
- Then due diligence relates to the actual operation and maintenance of its security system, especially around vulnerability testing. Thus a company might take due care in analysing and designing their security policy, but not take due diligence in actually proving that it works. It can work the other way, in that a policy might be implemented with due diligence, but the originally creation of the policy has not been properly analysed/designed. It is thus important, in terms of any future liability, that security systems are designed, analysed, implemented and maintained with both due care and due diligence.

## Impact and Harm

# Impact and Harm

Physical or Digital harm.  
Economic harm.  
Psychological harm.  
Reputational harm.  
Social and Societal harm.

# cyber & data

“From bits to information”

## Kill Chain Model

# Incident Taxonomy

## A Threat:

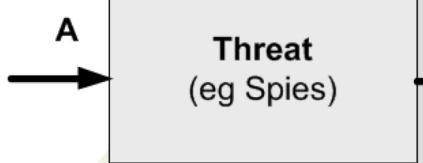

- Hacker.
- Spies
- Terrorists.
- Corporate Raiders.
- Professional Criminals.
- Vandals.
- Military Forces.

## is achieved with Attack Tools:

- User command.
- Script or program.
- Autonomous Agent.
- Toolkit
- Distributed Tool.
- Data Tap.

## for Vulnerabilities:

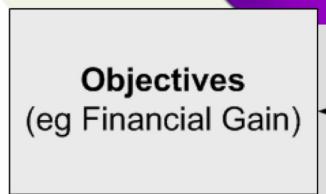

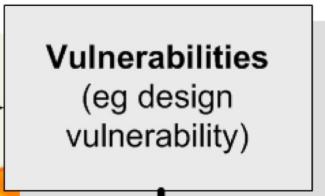

- Implementation vulnerability.
- Design vulnerability.
- Configuration vulnerability.

Is achieved  
with

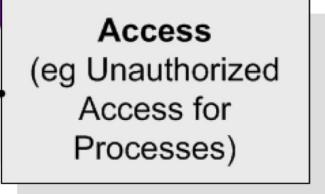

for

in, for

which

with

## for Objectives:

- Challenge/Status.
- Political Gain.
- Financial Gain.
- Damage.
- Destruction of an Enemy.

## which Results in:

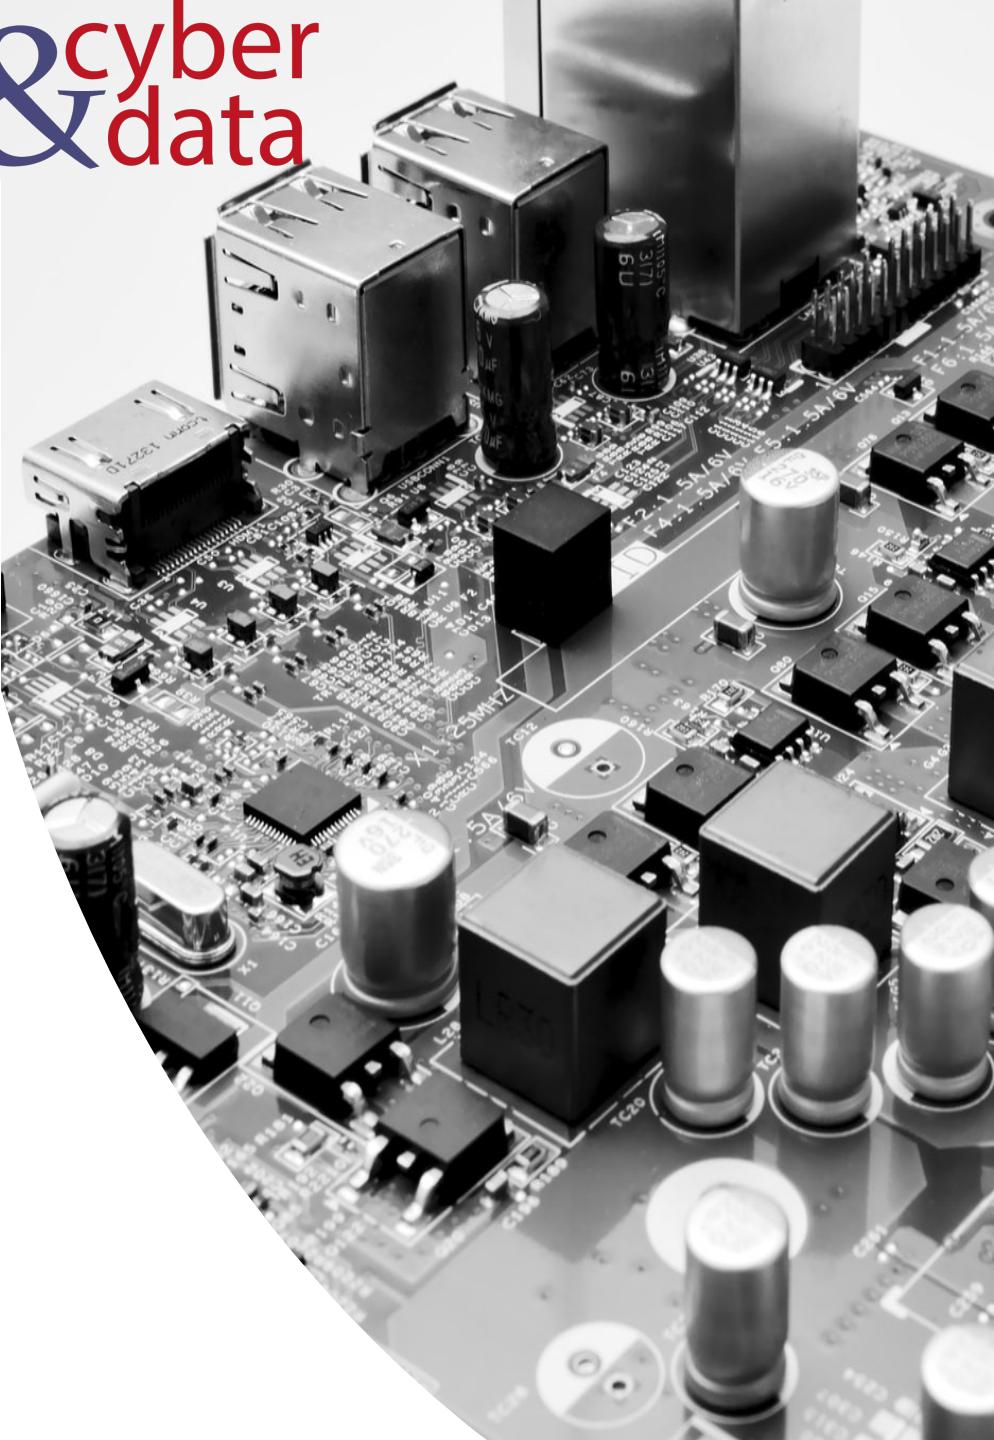

- Corruption of Information.
- Disclosure of Information.
- Theft of Service.
- Denial-of-Service.

## with Access for:

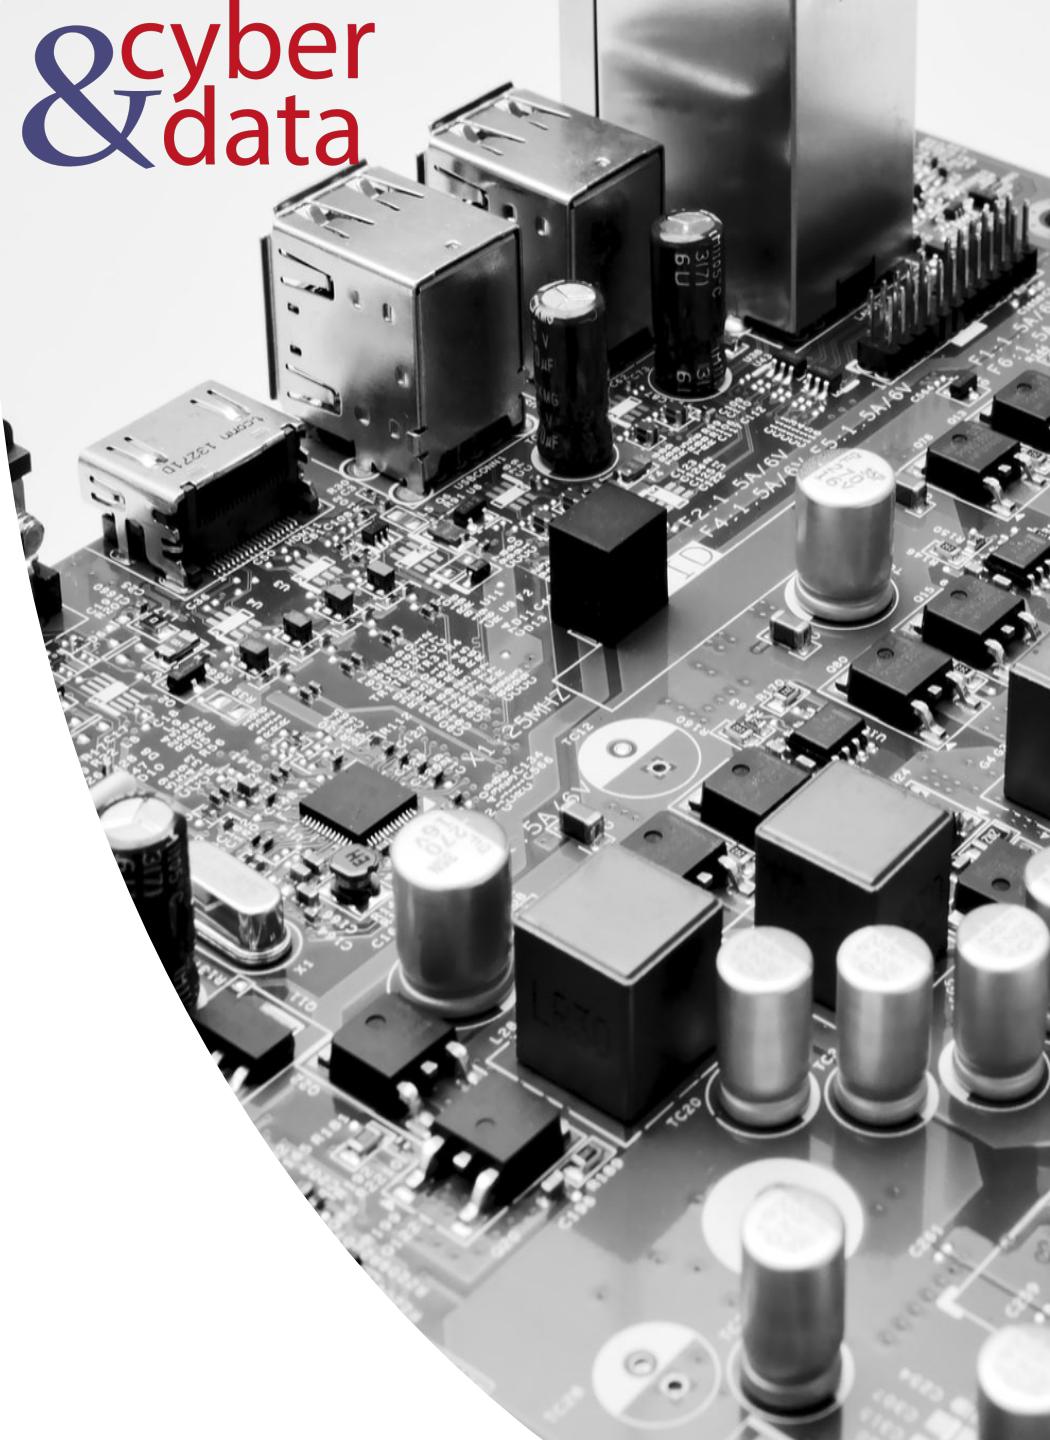

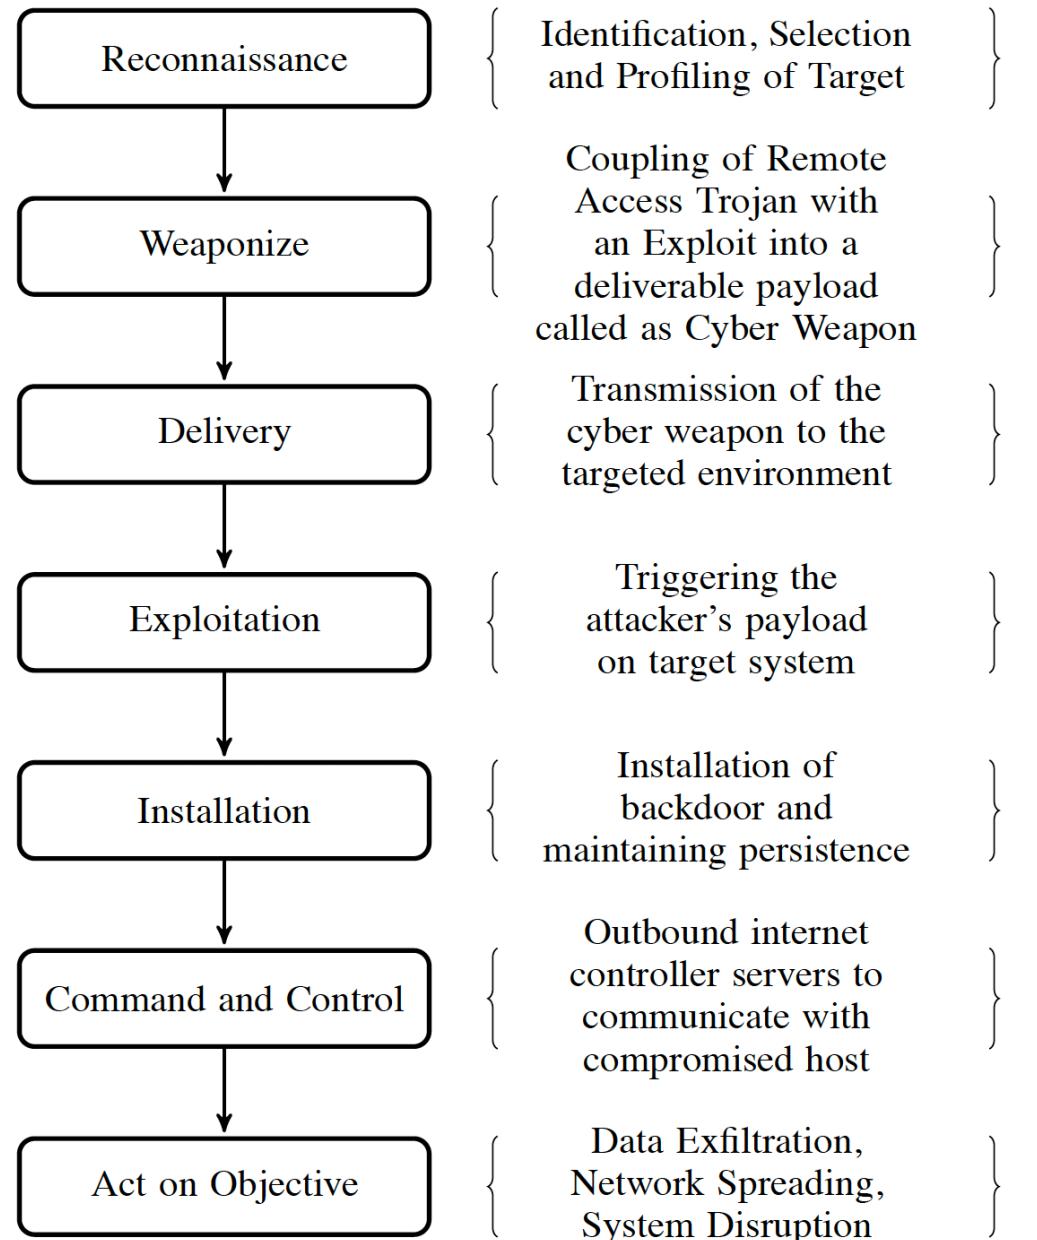

- Files.
- Data in transit.
- Objects in Transit.
- Invocations in Transit.
